

# HEAD & FACE PROTECTION

## **The First Line of Defense.**

Comfortable protective headgear and windows from Gateway Safety allow workers to concentrate on the job, not the hazards.

Durable polycarbonate and PCTG windows provide dependable secondary protection against light splash, airborne debris, dust and sparks. Windows of molded polycarbonate, .060" thick, are leaders in impact resistance.

Gateway Safety's gray windows allow natural colors to flow through. Gray windows, much like gray protective eyewear lenses, have replaced green windows in many workplaces. Other windows available include PCTG and polycarbonate, .040" thick.

High density polyethylene hard hats and chin protectors provide even greater protection.

**Gateway**  
SAFETY, INC.

**HEADGEAR** – Large crown protector reduces overhead glare and cam-type attachment system accepts windows with the most common hole pattern. Ratchet size adjustment is standard in suspension system for accurate and easy fitting. Stops on both sides of suspension system hold window in desired position.

**WINDOWS** – Gateway offers anti-glare gray windows, the standard for anti-glare spectacle lenses. Gray windows do not distort colors, a common problem with competing green windows.

Three window types meet workplace needs at the lowest cost:

All windows comply with ANSI and CSA standards. Universal hole pattern allows the use of most headgear and cap adapter brands. Standard sizes: 8 x 15.5" and 8 x 12".

- Molded polycarbonate, .060" thick, provides state-of-the-art protection. Available in clear, gray and infrared filter shades 3 and 5 for cutting and welding. All molded windows except shade 3 are available with a gold coating that deflects heat.
- Unbound and aluminum bound flat .040" thick polycarbonate. Quality impact protection at moderate prices. Clear only.
- Inexpensive, unbound .040" thick PCTG. Complies with ANSI standards for impact protection. Recommended for light or non-impact use. Clear or gray only.

**CHIN PROTECTOR** – Provides increased face and chin protection. Clear polycarbonate. Must be used in conjunction with specially designed, molded polycarbonate and propionate windows. Windows are available in clear only.

**PROTECTIVE CAP –**

- Complies with 1998 ANSI standards for classes E, G and C in types I and II and with CSA standards.
- Lightweight, high-density polyethylene provides excellent electrical insulation and impact resistance.
- Six-point nylon suspension with ratchet or standard adjustment for accurate sizing.
- Equipped with brow pad and universal accessory slots for faceshields.
- White, yellow, orange, blue, red, green and hi-viz orange.

**CAP ADAPTERS –**

Two di-electric models and one aluminum model mounts windows directly to protective cap. The aluminum model is

secured by a coiled spring. Di-electric models are secured by either blades that fit into slots on cap or a rubber cord.
